

Case Study:

US Military armory requires storage growth in existing footprint

Problem: Weapons are stored in existing Stanley Vidmar cabinets with no visual inventory capable without opening every drawer in all cabinets. Inventories of weapons, scopes and gear take all day due to ineffective storage solution for weapons.

Objective: Design a system allowing a visual account of all weapons with room for growth and the flexibility to accommodate all weapon types.

Solution: MTM Business Systems designed a custom Combat Weapon Storage system on mobile carriages and static shelving with modular drawer storage and sniper case storage.

Our custom solution reduced the storage footprint required inside the armory for storage and allowed for offices to be built in the same space.

With several types of weapons, M-4s, M-16s, M-2s, MK-19s, assorted shotguns, M-240s, M-249s, assorted pistols, mortars and scopes, NVG, spare barrels, our design encompassed storage for all requirements as well as future requirements to store MK16s/MK17s and organized a large armory with growth in mind.
